

Fawoo Monthly Product Information Release-AUG 2008

-Large Format (4'x8') LED Light Panels

Fawoo Canada Inc. introduces a new series of “Large Format LED Light Panels” for store fixtures, promotional light boxes, restaurant menu boards, and signage applications. (See picture below)

With the LED Panel thickness of only 3/8”, these 4’x8’ LED Light Panels are designed to optimize the light distribution over the entire panel while maximizing the surface brightness to more than 2,000 LUX at any location on the entire panel. The Fawoo 4’x8’ LED Light Panel consumes approximately 100W of power, while the standard fluorescent light boxes consume 400W - 500W for the identical size. The LED Light Panels have started to replace traditional fluorescent light boxes

which consume large amounts of energy, generate too much heat and need constant maintenance. A multiple of 4’x8’ LED Light Panels can be aligned together to form an even larger light panel (see picture below).

These panels have recently been installed at the head office of a world class company in Toronto. With the manufacturing plant located in Markham, Ontario, Fawoo Canada provides customers with fast delivery of any customized size panel, local customer support, and standard 2 years product warranty.
